The promise at the other end

AI that helps your people deliver

A customer story for
Microsoft Frontier Company

Independent concept by Meghan Fasano
Fictional scenario. Not official Microsoft material.

“We open on Friday. Will we be ready?”

Maya runs store operations.
A critical delivery has slipped.

The opening date is on the calendar.
The recovery plan is not.

The answer is scattered across the business

Inventory

A replacement unit at another location

Supplier update

A revised delivery with no firm ETA

Store schedule

An installation crew with a narrow window

Finance policy

A cost exception that needs approval

Maya becomes the connection between every system.

What if the next step arrived with the answer?

A shared picture. A workable plan. A person accountable.

The Frontier opportunity starts inside your business

Your intelligence

The knowledge, data and experience that make your business yours.

Your trust

Access, oversight and accountability for using AI with confidence.

Microsoft expertise, working with your teams to build and improve the workflow.

Maya gets a shared picture, with the gaps visible

What changed	The refrigeration delivery slipped.
What may help	A suitable unit appears available nearby.
What still needs a person	The carrier must confirm the new delivery window.

Connected sources and timestamps support review.

The next step becomes a recovery plan

01

Check the alternative

Verify fit, stock and delivery constraints.

02

Prepare the decision

Show options, costs and missing evidence.

03

Coordinate approved work

Assign owners and follow the exception.

The choice still belongs to Maya

AI prepares

Evidence
Options
A draft recovery plan

Maya approves

The trade-off
The spend
The promise to the customer

Uncertain or out of bounds? Stop and bring in a person.

The work keeps moving after the decision

1

Approved action

Update the plan

2

Named owner

Keep work moving

3

Verified result

Confirm what happened

4

Better next time

Improve the workflow

The technology follows the work

Where Maya works	Microsoft 365 Copilot and familiar channels
How work connects	Copilot Studio agents and workflows
Business knowledge	Approved enterprise systems and data

Trust throughout

Identity
Access
Data policy
Oversight

Illustrative pattern. Validate integration, permissions, controls and licensing.

Success is visible in the customer experience

Measure	What it tells us	Decision it supports
Time to resolution	How long customers wait for an answer	Is the workflow faster?
Commitments kept	Whether the agreed promise holds	Is the service more reliable?
Repeat contact	Whether the customer has to ask again	Did we resolve the issue?
Cost per exception	Total handling, AI and recovery costs	Does value justify the cost?

Proposed measures. Establish a baseline and agree targets before deployment.

One production workflow creates a path to scale

01

Define the result

Business owner, baseline, scope and decision rights.

02

Build for real work

Approved data, integration, controls and user training.

03

Earn operational trust

Evaluate cases, gate rollout, monitor and retain fallback.

04

Expand with evidence

Review outcomes, cost and quality before broader use.

Which customer promise will we protect first?

One workflow.
A real owner.
An outcome worth improving.
